

SNOW CHAIN FOR VEHICLE WHEELS

ABSTRACT OF THE DISCLOSURE

A snow chain to be mounted on a tire has a connection set having a plurality
5 of planks, each of which has an arch portion and a connection portion. A radial chain
set has a plurality of radial chains having ends coupled with the planks respectively. A
main chain is coupled with distal ends of the radial chains, wherein the main chain has
a hook device to connect opposite ends of the main chain into an annular form. A
coupling assembly set has a plurality of coupling devices to tighten two of the planks,
10 each of which has a rotary member and two connection member movably mounted on
the rotary member.
